a

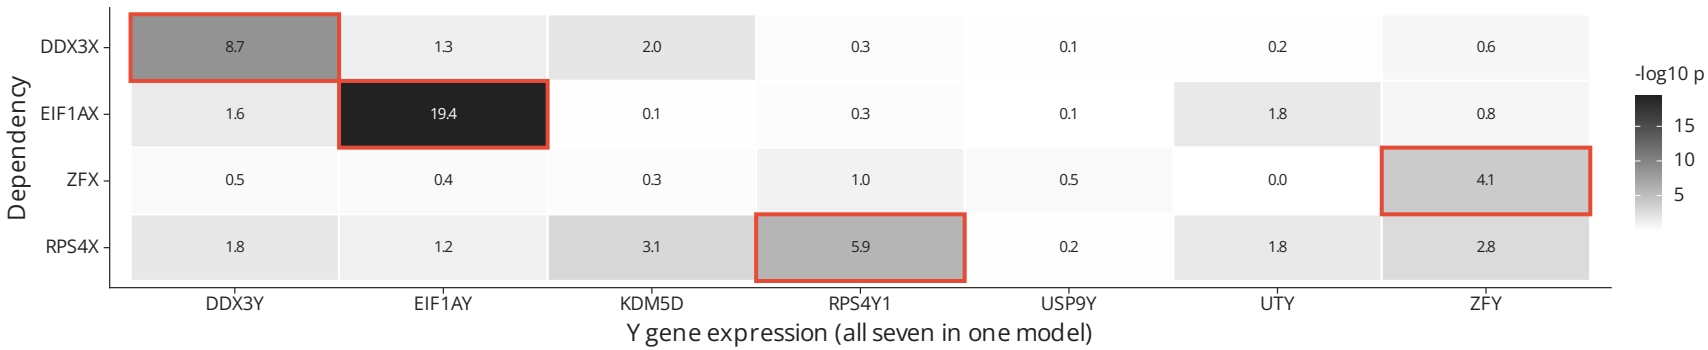

Dependency on each X gene tracks expression of its own Y partner

605 eligible males with CRISPR and RNA, including the 69 set aside from the two-group call (mostly partial Y deletions).

b

With all seven Y genes in one model, the paired gene is the strongest term for 4 of 4 dependencies

Robust fit of each dependency on all seven Y genes plus lineage and library, on the same lines as panel a. Outlined: the paired gene. Numbers: -log10 p of each term.
