a

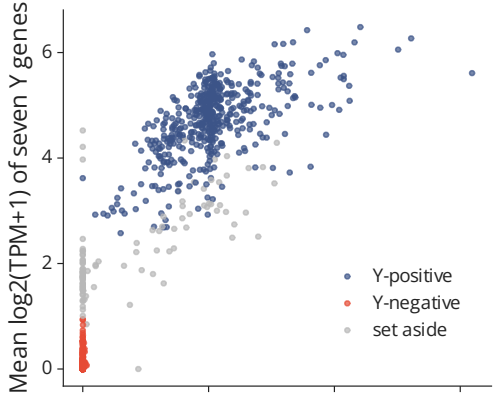

No female line exceeds 0.99; males form two modes

711 female and 905 male default RNA profiles. Dashed lines: depleted at 1.0 or below, expressed at 2.5 or above.

b

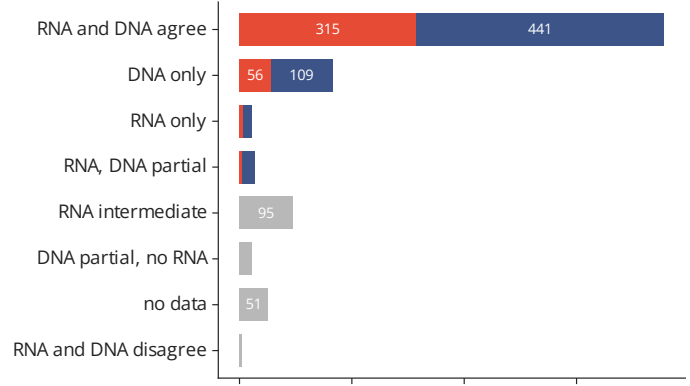

RNA and DNA agree in 756 of 760 definite males

Males with RNA and DNA. The copy ratio is relative to the sample mean: about 0.5 is one Y in a diploid line.

c

383 Y-negative, 588 Y-positive, 172 set aside

All 1,143 annotated males in Model.csv, by the evidence behind the call. Counts shown for bars of 40 or more.
