a

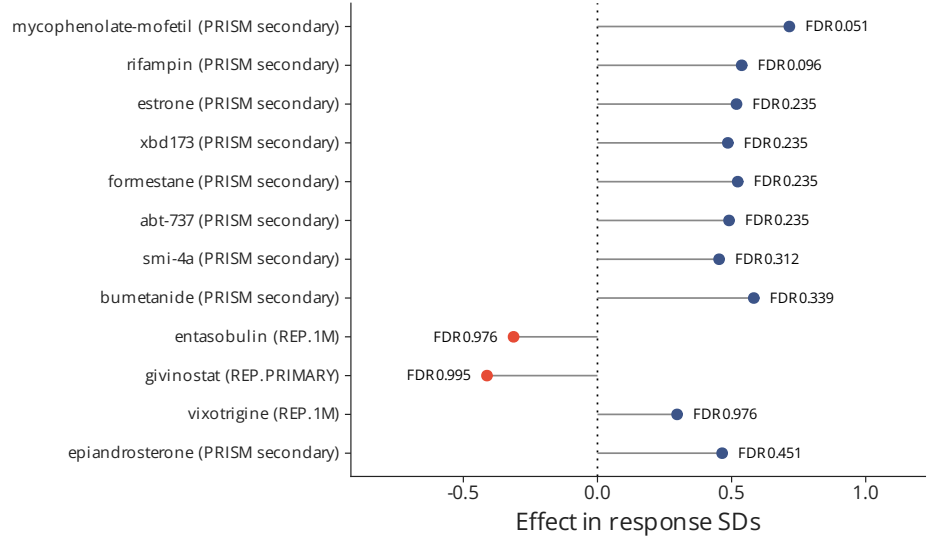

No compound passes FDR 0.05 in any of 7 dataset-screens

6,413 compound tests; response on lineage and Y status, donor-clustered robust errors. Points on the dotted line are what chance gives. REP.* are the PRISM primary screens.

b

The smallest FDR is 0.051, and that compound does not replicate

Twelve smallest p-values across all datasets; FDR is within dataset. Negative (red): Y-negative lines more sensitive. Positive (blue): less sensitive.
