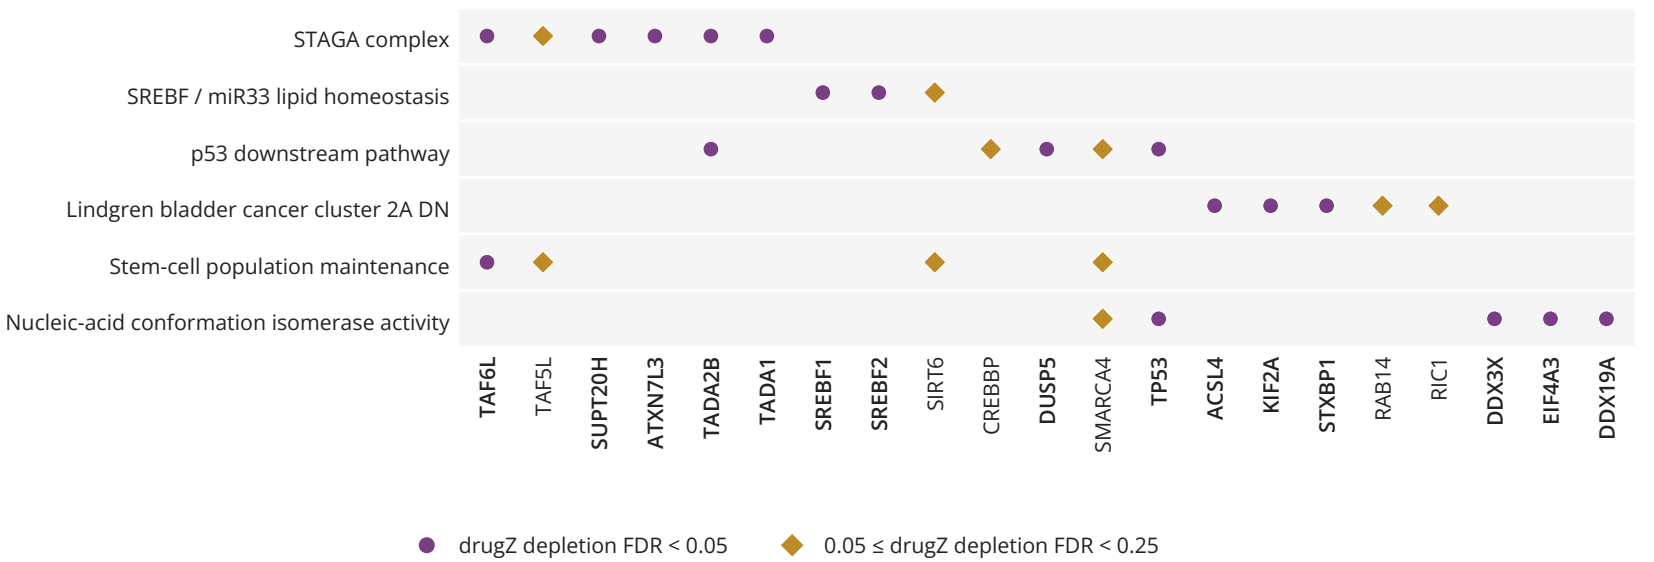
a Metascape enrichment of all 48 drugZ depleted hits

	n	q ≈	Contributing genes
STAGA complex, SPT3-linked	6	1.6e-07	TAF6L, TAF5L, SUPT20H, ATXN7L3, TADA2B, TADA1
SREBF and miR33 in cholesterol and lipid homeostasis	3	0.013	SREBF1, SREBF2, SIRT6
PID P53 DOWNSTREAM PATHWAY	5	0.032	CREBBP, DUSP5, SMARCA4, TP53, TADA2B
LINDGREN BLADDER CANCER CLUSTER 2A DN	5	0.032	ACSL4, KIF2A, STXBP1, RAB14, RIC1
regulation of stem cell population maintenance	4	0.032	SMARCA4, TAF6L, TAF5L, SIRT6
nucleic acid conformation isomerase activity	5	0.032	DDX3X, SMARCA4, TP53, EIF4A3, DDX19A
Epigenetic regulation of gene expression by MLL3 and MLL4 complexes	4	0.209	CREBBP, KMT2D, MED12, AGPAT2
LIU SOX4 TARGETS DN	5	0.537	SMARCA4, UBE2G2, UROS, RAB14, ZNF654
BORCZUK MALIGNANT MESOTHELIOMA UP	5	0.537	CREBBP, KIF2A, UROS, WTAP, TAF5L
post-Golgi vesicle-mediated transport	3	1	IGF2R, LLGL1, RAB14
phagocytic vesicle	3	1	ITGB5, RAB14, AMBRA1
protein localization to organelle	6	1	ANK2, DDX3X, TIMM8A, IGF2R, RPGRIP1L, SIRT6
DACOSTA UV RESPONSE VIA ERCC3 UP	4	1	TP53, UROS, AGPAT2, CSRNP2

b Contributing genes in the six representative terms with q < 0.05



Custom background: 18,975 genes in the enrichment tables. Dashed line: q = 0.05.
Values retain the original export precision; automatic prioritised-subset statistics are not plotted.
